#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-3,5-7,9-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Okada et al (5809454).

As per claims 1,9,18, Okada et al (5809454) teaches an arrangement station for reproducing a multimedia signal the arrangement comprising presenting means for presenting the multimedia signal to a user (Fig. 1,6;col. 1 lines 5-28), delay determining means for determining a packet delay measure representing the arrival delay of packets carrying the multimedia signal (as determining the time differential between data arrival and playback mode (col. 6 lines 35-55), as a delay (col. 11 lines 25-50), based on the differential bit rate (col. 6 lines 50-55)); and the presenting means includes a comparison means for determining a difference value between the packet delay measure and a reference value (as counting the difference between the write signal pulses and the read signal pulses -- col. 7 lines 21-31); and an adjusting means for adjusting the presenting

speed in dependence on the difference value (as adjusting the sound interval for compression/expanding according to the write process -- col. 7 lines 34-50).

As per claims 2,10, Okada et al (5809454) teaches varying the presentation speed of the sound without changing the intonation of the audio signal (abstract).

As per claims 3,11, Okada et al (5809454) teaches varying the duration of the segments based on the packet delay (col. 11 lines 35-49; col. 9 lines 1-66)

As per claims 5,17, Okada et al (5809454) teaches adapting the reference value in dependence on the variations of the difference value (col. 9 lines 45 – col. 10 line15).

As per claims 6,7,12,13, Okada et al (5809454) teaches adjusting the movement speed of the object video signal (col. 14 line 30 – col. 15 line 65; col. 18 lines 10-65).

As per claim 14, Okada et al (5809454) teaches comparison of the time values to measure the packet delay (as time based indexed signals for synchronization –col. 11 lines 50-60)

As per claim 15, Okada et al (5809454) teaches a reference value flag based on the buffer measurements (col. 20 line 61 – col. 21 line 9)

Art Unit: 2655

As per claim 16, Okada et al (5809454) teaches playback speeds up to 300% (or 3 times) without changing the intonation of the audio signal component (Fig. 13; col. 16 line 33 – col. 17 line 25).

## Response to Arguments

3. Applicant's arguments filed 9/16/2003 have been fully considered but they are not persuasive. As per applicants arguments that Okada does not teach a packet delay, examiner notes that the delay taught by Okada is a delay calculated between and audio frame and a video frame (or, in other words, and audio packet versus a video packet (col. 11 lines 35-50).
